

Acrylic Mirrors

Impact resistant acrylic safety mirror

Description

Introducing our Impact Resistant Acrylic Safety Mirror, engineered to meet the demands of environments where the use of conventional glass mirrors is impractical or poses safety risks.

Constructed with precision at a thickness of 6mm, our acrylic mirrors exhibit exceptional structural integrity, boasting a tensile strength approximately 10 times greater than standard glass mirrors.

Our acrylic safety mirrors offer a robust solution to the limitations of traditional glass alternatives. Their heightened resistance to impact ensures sustained functionality in high-traffic areas while effectively mitigating the hazards associated with mirror breakage in public spaces.
