

UNIVERSITY OF BRISTOL Dental School

CASE STUDY

In July 2022, Medspace was awarded the FF&E package for the New University of Bristol Dental School.

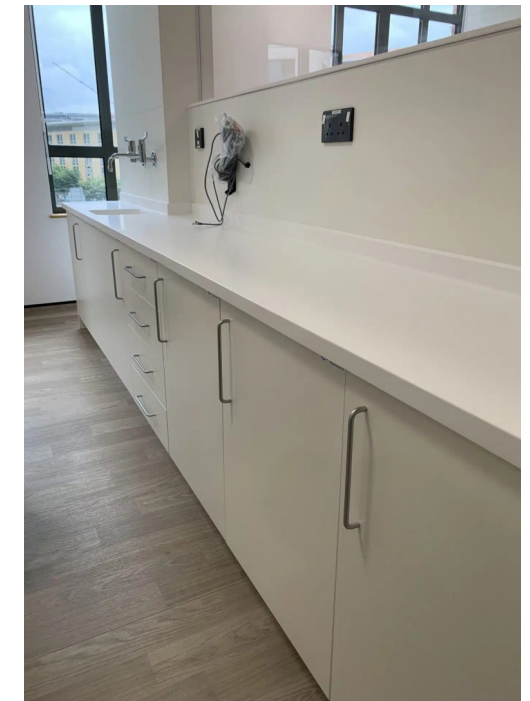

Working closely with the University and construction company Kier, Medspace were tasked to design, manufacture and install bespoke Reception Desks, 119 Dental Bays, Worktops, Roller Racking and HTM71 Storage as well as fit Group 2 items such as hooks, mirrors, grab rails and soap dispensers.

Once again, cleanliness, clever design and functionality were paramount in the successful execution of the project. The existing building spanned six floors and hosted a series of challenging shaped rooms and obstacles to overcome. Working alongside the Kier design and site teams, Medspace worked to fit all bespoke items within the existing fabric of the building, producing more than 160 designs to meet the exact needs of the university staff and students. The communication between the design and the installation team played a huge part in ensuring that the highest level of finish was achieved with weekly meetings held to iron out issues before they got to site.

This high standard is immediately apparent as you enter the building and view the 'centre piece' main reception desk, which features a solid surface desk with whitewashed birch panelling, surrounded by a fully bespoke structure featuring fully integrated services, matching the same birch finish to compliment the integral desk.

The £27million purpose-built facility near Bristol Temple Meads train station was successfully opened in 2023 following extensive renovations. Medspace is proud to have been part of creating this exciting upgrade for students and staff, incorporating bespoke design and the latest equipment spread across 7,300 square meters of space.
